Palmitoylethanolamide (PEA, pronounced like "pee-ya") is a substance the body can produce itself when certain stimuli occur. This substance is also present in foods, albeit in small amounts – especially in offal, fish, meat, soy, peanuts and eggs.

In the 1990s the Nobel laureate Rita Levi-Montalcini discovered the effects of PEA. Numerous studies on PEA have been conducted since then, and our knowledge of the mechanism of action is continually growing. There are over 300 scientific publications on this substance.

In certain situations where demand is increased, it may be advisable to supplement with additional PEA. PEA is endogenous, which means it is readily absorbed from the gut and transported to the tissues. After use in the cells it is simply broken down into its components.

PEA-opt® quality seal

The Vitals product PeaPure® contains only PEA bearing the PEA-opt® quality seal, which is produced by a patented manufacturing process. This ensures that the product has a unique ratio of PEA particles of different sizes (reduced, refined and ultra-refined particles). Palmitoylethanolamide that has not been treated in this special way may be more difficult for the body to absorb and is therefore less effective. PEA products bearing the PEA-opt® quality seal guarantee a highly pure, high-quality palmitoylethanolamide content and optimal absorption. The PEA used for PeaPure® is tested for quality and purity by an independent laboratory in every batch.

Active ingredients

Active ingredients*	per daily serving (3 capsules)
Palmitoylethanolamide (PeaPure®)	1200 mg

* No reference intake is specified according to the EU Food Information Regulation (LMIV).
PeaPlex® and PeaPure® are registered trademarks of the JP Russell Science Group.

Ingredients

Palmitoylethanolamide, hydroxypropylmethylcellulose (vegetable capsule).

Recommended use

For the first two months take one capsule three times a day with a meal and plenty of water, or as recommended. The daily dose can also be taken in two doses (e.g. two capsules in the morning and one capsule in the evening).

Manufacturer's notes

It is strongly recommended to use PeaPlex consistently for at least two months. Most users of PeaPlex notice a difference after just a few weeks. After two months you may consider whether you:

- continue taking one capsule twice a day
- reduce intake to one capsule once a day
- stop taking it

If the effect diminishes after a reduction in dose, it is recommended to increase the dose again to one capsule two to three times per day. The stated recommended daily intake must not be exceeded.
