Overview

Heart Risk Blood Test

Product number: MV5106

Price

€84.00

Prices incl. VAT plus shipping costs

Description

Laboratory chemical analysis to determine selected heart-risk parameters

Lack of exercise, stress, diabetes or nicotine use are just some of the factors that can endanger heart health. A healthy lifestyle, as well as careful provision of all important nutrients, on the other hand supports the heart in its function. To gain an overview of the current supply status, it is advisable to have a current value determined. The lipid metabolism is particularly important for the well-being of the heart. Based on its measured parameters, conclusions can be drawn about a health risk. The heart-risk blood test determines the current values in capillary blood based on the parameters cholesterol, HDL cholesterol (high-density lipoprotein), LDL cholesterol (low-density lipoprotein) and triglycerides.

The test kit includes:

- 1 sample collection instruction
- 2 lancets
- 1 sample tube
- 2 alcohol swabs
- 1 fingertip plaster
- 1 guarantee certificate
- 1 sample accompanying form
- 1 shipping envelope

How does the ordering process work?

After placing your order, the requested test kit will be sent to you with detailed instructions. You put your sample into a sample tube, send it in the prepared envelope to Medivere's partner laboratory GANZIMMUN Diagnostics GmbH and receive a report evaluating your profile after 5–7 days.
