Overview

Selenium + Zinc Blood Test

Product number: MV5102

Price

€42.00

Prices incl. VAT plus shipping costs

Description

Laboratory chemical analysis to determine zinc and selenium concentrations from capillary blood

Zinc is one of the trace elements and is vital (essential). As a component of enzymes it is involved in many important processes in the body. As an activator of important enzymes, zinc also plays a significant role. For example, it is involved in lipid metabolism. It also influences the formation of thyroid and sex hormones, supports the normal function of the immune system and is regarded as an important antioxidant.

An adequate supply of zinc is therefore extremely important. Intake via dietary supplements should, however, be considered carefully, since an overdose can have negative effects on the absorption of other nutrients. Determining the current status is therefore very sensible.

Selenium is also a trace element and is a component of numerous enzymes. It plays an important role particularly in thyroid metabolism and in the formation of sperm. Selenium helps protect cells from oxidative stress and contributes to the maintenance of normal hair and nails. The problem with achieving an adequate selenium supply in Europe is that the soils are low in selenium. Since selenium is otherwise mainly taken up through animal foods, supplementation can also be sensible for vegetarians or vegans.

Whether and how much of the two trace elements should be supplied can be determined by assessing the current levels. The Selenium + Zinc blood test does this by measuring the concentration of the trace elements in capillary blood.

The test kit includes:

- 1 instruction leaflet for sample collection
- 2 lancets
- 1 sample tube
- 2 alcohol swabs
- 1 fingertip plaster
- 1 sample submission form
- 1 return envelope

How does the ordering process work?

After your order, the requested test package will be sent to you with detailed instructions. You place your sample in a sample container, send it in a prepared envelope to Medivere's partner laboratory GANZIMMUN Diagnostics GmbH and will receive a report with the evaluation of your profile after 5-7 days.

Product information

Type of test:	Blood test
Application:	Anti-ageing, Skin & Hair, Immune system, Bones & Joints, Liver, Love life, Pregnant, Metabolism
Product type:	Medical device
