Description

Combination preparation for an energetic everyday life

Full calendars, work-related stress or a hectic family life can demand a lot from us. When tiredness and exhaustion add to this, coping with everyday life can become a challenge.

NATURA FELIX P-5-P Coenzyme B6 combines vitamin B6 (pyridoxine), vitamin B2 (riboflavin) and magnesium. All three substances are essential nutrients, perform similar tasks and thus form an optimal combination for an

energetic everyday life.

Vitamin B6 is present as the biologically active pyridoxal-5-phosphate. This means it can be used immediately by the body and does not first need to be synthesised in the liver.
The vitamin plays an important role in the formation of the neurotransmitters dopamine, noradrenaline and serotonin as well as in hormone regulation. Vitamin B6 contributes to the reduction of tiredness and fatigue.

Vitamin B2 is particularly important for vision. It helps to maintain normal vision and supports the mucous membranes in their function. Especially noteworthy is its property of helping to protect cells from oxidative stress.

Magnesium plays an important role above all for muscles and bones, but also for our nerves.

Optimal interplay of similar properties

All three nutrients are very similar in their function and partly perform the same tasks. For example, they support the reduction of exhaustion and tiredness. In addition, they work excellently together. Vitamin B6 plays an important role in blood formation, vitamin B2 in the maintenance of red blood cells, and magnesium, through its role in cell division, also influences blood formation.

P-5-P Coenzyme B6 is therefore a truly successful blend of carefully selected nutrients that is a reliable companion for a demanding everyday life.

Nutritional properties

- Magnesium contributes to the reduction of tiredness and fatigue.
- Magnesium contributes to the electrolyte balance and to normal energy metabolism and has a function in cell division.
- Magnesium contributes to the normal function of the nervous system and to normal psychological function.
- Magnesium contributes to normal muscle function and to normal protein synthesis.
- Magnesium contributes to the maintenance of normal bones and teeth.

- Vitamin B6 contributes to normal cysteine synthesis and to normal energy metabolism.
- Vitamin B6 contributes to the normal function of the nervous system and to normal psychological function as well as to the reduction of tiredness and fatigue.
- Vitamin B6 contributes to normal homocysteine metabolism as well as to normal protein and glycogen metabolism.
- Vitamin B6 contributes to the normal formation of red blood cells and to the normal function of the immune system.
- Vitamin B6 contributes to the regulation of hormonal activity.

- Riboflavin contributes to normal energy metabolism.
- Riboflavin contributes to the normal function of the nervous system.
- Riboflavin contributes to the maintenance of normal mucous membranes and to the maintenance of normal skin.
- Riboflavin contributes to the maintenance of normal red blood cells.
- Riboflavin contributes to the maintenance of normal vision and to normal iron metabolism.
- Riboflavin helps to protect cells from oxidative stress and contributes to the reduction of tiredness and fatigue.
